

# Fast and safe knife changing

## Valmet Easy Turn

The positioning of the disc chippers is facilitated by Easy Turn, which gradually shifts the chipping disc when the knife is changed.

### Valmet Easy Turn operation principle

The Easy Turn device is mounted between the motor and the chipper disk and it features variable speed drive and a drive wheel. The drive wheel can be pushed pneumatically onto the chipper's break disk to turn the chipper disk.

Chipper disk is remotely rotated to a correct position. Knife positioning is made easy by using the joystick to rotate the chipper disc and adjusting the laser beam to point to the knife positioning mark.

*Suitable for all Camura, Rauma and Carthage chippers equipped with disc brakes.*

- **Faster**
  - reduces knife changing time
- **Safer**
  - improves safety at work
- **Easier**
  - user-friendly
